

Copier / Laser Paper Tips:

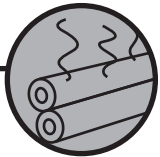

Loading Machine

- Fan material thoroughly before loading into machine. This helps to aerate and separate sheets that have been compacted during the packaging and shipping process.
- Paper is grain short.

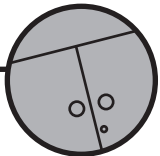

Ink Jet

- Most ink jet printers use water base inks that will not adhere to "Rite in the Rain". Simply make an ink jet master copy then create "Rite in the Rain" duplicates on a photocopier.

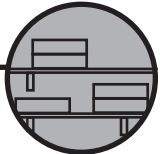

Fuser Settings

- Use "standard paper" setting on your copier.
- "Rite in the Rain" is not a plastic. There is no risk of melting in your machine.

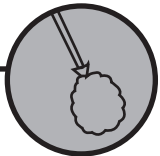

Storage

- Always keep stock wrapped in factory packaging until ready to use. This keeps your material at the quality specifications held during the manufacturing process.
- Store material flat and at room temperature.

Shelf Life

- To assure a long and unlimited shelf life, keep your product in the original packaging away from moisture and sunlight.

Cleaning

- As with most papers, use a 99% pure Isopropyl Alcohol solution to clean your copier's feed and separation rollers to help prevent double feeding.

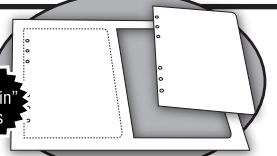

FREE
FORMS[®]

Download Free Copies of a variety of 8 1/2" x 11" or loose leaf sized forms. Various grid sheets and common industry templates are available so you can easily produce your own all-weather forms with a click.
